Nicotiana tabacum mRNA for calcium-dependent protein Kinase 3 (GppA3 gene).

(GppA3 gene).

AJ44155
AJ44155.1 GI:16215470

Calcium-dependent protein kinase; cdpk3 gene.

Common tobacco.

Nicotiana tabacum

Direct Submission

Submitted (28-JUN-2000) Arabidopsis thaliana Genome Center, Department of Biology, University of Pennsylvania, 38th and Hamilton Walk, Philadelphia, Philofoly 1338 bases. The On Jun 28, 2000 this sequence version replaced gis.6007863.

This submission of BAC FISO4 is shorter by 1338 bases. The Original BAC had a Thlo transposon insertion (Gb) 101829.1 [TRN101S13] from E. coli located at the junction of bases 18229 and 18230 of this submission.

Producing plant having increased disease resistance, comprises regenerating plant from a non-naturally occurring plant cell over-expressing a polynucleotide encoding a calcium dependent protein kinase polypeptide WPI; 2002-062179/08. P-PSDB; AAM48000.

Disclosure; Fig 1; 44pp; English

The invention relates to producing a plant having increased disease resistance, comprising providing a non-naturally occurring plant cell over-expressing a polynucleotide encoding a calcium dependent protein kinase (CDPK) polypeptide and regenerating a plant from the plant cell, where the CDPK polypeptide is expressed in the plant, increasing the resistance of the plant. The method is useful for a variety of agricultural and commercial purposes including improving a plant's resistance against plant pathogens, increasing crop yields, improving resistance against plant pathogens, increasing crop yields, improving crop and ornamental quality and reducing agricultural production costs. The method facilitates an effective and economical method for in-plant pathogens, increasing crop yields, improving crop and ornamical practices (e.g. application of fungicides, creatitional chemical practices (e.g. application of fungicides, contributes to the production of high quality and high yield agricultural contributes to the production of high quality and high yield agricultural contributes or graduction of high quality and high yield agricultural contributes or graduction of high quality and high yield agricultural costs and high quality and blotches that are caused by contributes or graduction of high quality and blotches that are caused by applying costs and high quality and blotches that are caused by commercial (e.g. fiber crops) purposes. The present sequence is that of Abrabidopsis thaliana CDPKZ of the invention.

```
protection against plant pathogen, reducing or minimising the need for traditional chemical practices (e.g. application of fungicides, bactericides, nematocides, insecticides, or viricides) that are typically used bactericides, nematocides, insecticides, or viricides) that are typically browling protection against disease causing pathogens. The method contributes to the production of high quality and high yield agricultural products, e.g. fruits, ornamentals, vegetables, cereals and field crops having reduced spots, blemishes and blocches that are caused by pathogens, agricultural products with increased shelf-life and reduced handling costs and high quality and yield crops for agricultural (e.g. cereal and field crops) industrial (e.g. cilseds) and commercial (e.g. fiber crops) purposes. The present sequence is that of Abrabidopsis thaliana CDPK4 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               855 AATGCTCGAAAGGAGCCCCAAGAAACGCATTTCTGCTCATGAAGCCTTGTGTCACCCATG 914

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to producing a plant having increased disease resistance, comprising providing a non-naturally occurring plant cell over-expressing a polynucleotide encoding a calcium dependent protein kinase (CDFK) polypeptide and regenerating a plant from the plant cell, where the CDFK polypeptide is expressed in the plant, increasing the resistance of the plant to disease as compared to a naturally. Occurring plant, The method is useful for a variety of agricultural and commercial purposes including improving a plant's resistence against plant pathogens, increasing crop yields, improving crop and ornamental quality and reducing agricultural production "côsts." The method facilitates an effective and economical method for in-plant

The present invention describes a method of producing plants which are resistant to the herbicides paraquat and diquat, involving inhibiting in the plants a calcium dependent protein kinase (CDPK) and selecting those plants which are resistant to the agrochemical of interest. This is useful in the production of crops with herbicide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             282

This is useful in the production of crops with herbicide resistance.
